-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 22 September 2004.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's Admitted Prior Art (AAPA) in view of US 6,149,051 (Vollmer). AAPA teaches paths of a first fluid and flow paths of a second fluid alternately arranged such that heat can be exchanged between the two fluids (paragraph 2), said production method for forming said flow paths by connecting a titanium-made flat container having an inlet of one of the fluids formed on one end and an outlet of the fluid formed on the other end to an offset-type titanium plate fin accommodated in said flat container and connected to the inner side of said container via top ends of concave strips of said titanium plate fin so as to form a plane to plane connection (paragraphs 2-5), comprising steps of: coating a brazing paste over positions to be connected of said constituting members by using a paste supply in an vacuum and/or inert gas atmosphere. (paragraphs 2-7). Vollmer teaches a brazing paste is prepared by atomizing an alloy comprising a Ti--Zr type brazing solder, which melts under 880.degree. C., containing 20 to 40 wt. % of titanium and 20 to 40 wt. % of zirconium so as to obtain a powdered alloy, which is mixed with a neutral binder so that said paste is prepared; and heating said brazing solder coated constituting members under 880.degree. C (abstract and col. 5, l. 35 to col. 6, l. 15). It would have been

obvious to one of ordinary skill in the art at the time of the invention to modify the braze material process of AAPA to utilize the braze material of Vollmer in order to provide a braze material that requires less temperature to braze and is more economical to formulate (see Vollmer col. 3, ll. 40-50)

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
